

forgot password taskflow

1. The user clicks forgot password?

2. The user enters their email and clicks send reset link

2.1 The server verifies that their is an account associated with their email address and sends the link

3. The user clicks the link in their email and the password reset page opens. They enter their new password.

NOTE: This may be better done using a reset code sent to their email, instead of a link.

The program would prompt for the code and then take them to the reset page

4. Their password has been changed and they return to the login screen
